

## **An elegant AVE home automation project in Francavilla al Mare**

**Between design and hi-tech solutions: AVE home automation embellishes the spaces of an elegant Italian house in Francavilla al Mare.**

Located in a prestigious sea view position, this elegant Italian house has chosen to rely on the advanced **DOMINA plus system** to make even more welcoming and comfortable its spaces. In this residence the innovative **AVE home automation proposals** are inserted to increase **comfort, safety** and to offer owners a new contact with the house.

Distinctive elements and symbol of **AVE home automation, DOMINA plus Touch Screen supervisors** are presented as refined furnishing accessories from which users can manage every aspect of the home. **Lights, temperature, rolling shutters** are easily controllable by Touch Screen, as well as the **anti-intrusion system, ventilation and irrigation**. Through these devices users can also receive signalling related to **technical alarms**, check their consumption for **energy saving** or activate customized **Scenarios** in order to adapt the house to their habits. This particular home automation function brings some controlled devices to a certain condition memorized by the system. With a single command, users can simultaneously manage **multiple actions**, for **relax** or better manage their home.

As well as most of the home automation functions, **Scenarios** can be recalled also through the dedicated commands. For example, in the **Francavilla al Mare** home, the bathroom's ventilation unit can be activated simply by touching a front plate's surface. In this project there is a valuable solution for the commands: **DOMINA plus home automation system** is matched with **touch technology**. Perfectly coordinated with the aesthetics of the Touch Screen, **Vera Touch front plates in clear white glass** welcome a new way of interaction with the domestic spaces, which mixes the utmost intuitiveness and practicality with an **exclusive design**.

Thus **Vera Touch front plates** become refined furnishing accessories to manage the home, perfectly integrated with the walls. Result obtained through special AVE boxes, which allow a **precision installation** of the plates with a **"wall-lined" final effect**.

This elegant Francavilla al Mare project is an example of how **AVE home automation** revolutionizes the **living's concept**. Through **innovative technologies and solutions**, the system developed by AVE is able to adapt to any need, embellishing the home with valuable elements - designed to offer that unique and personalized aesthetics that anyone would want for their home.
