

AVE DOMINA Smart: now home automation, anti-intrusion and video intercom merge in a single integrated IoT system

DOMINA Smart is the AVE solution for home automation that combines the best of anti-intrusion and video intercom with remote control and voice commands: all in one system.

More integration among the systems, more supervision tools, more interactivity to create a cutting-edge smart home, suitable for every technological need. It's with these assumptions that **DOMINA Smart** is born: the new integrated IoT ready platform that concentrates all the AVE technological systems. **Home automation, anti-intrusion and video intercom** interact with each other, expanding both the system possibilities and, consequently, the opportunities of the installers who can meet every request of the end users now, relying on a **single wide integrated system**, that is quick to install, simple to manage and to propose; a complete system to create a **last generation smart home** with:

- **Remote controls.** DOMINA Smart has designed to be flexible, but also user friendly. Thanks to the AVE Cloud app, it's very easy to manage every automation, even when you are away from home. There's more: you can also control the anti-intrusion. Everything from a single app, that is already available for iOS and Android devices. AVE Cloud also offers the ability to create scenarios using smartphone and customize them according to where you are (geo-localized scenarios).
- **Voice commands.** DOMINA Smart is compatible with the main Voice Assistants and allows you to manage through voice all the home automation functions (such as lights, temperature, shutters, sound diffusion, ventilation, irrigation, ...), scenarios, routines and the entire IoT ecosystem that can potentially be created in the home.

DOMINA Smart is the ideal solution to protect your home to the fullest. In the event of **water leak (or gas leak)**, the system sends a notification on the touch screens and via app, and secures the room interrupting the supply of water and electricity (or blocking the gas supply). Even if **smoke** is detected, the AVE system immediately notifies the alarm to supervisors, via smartphone and - if required - to the authorities.

Recently expanded through the new **smart IoT central units**, the **DOMINA Smart Anti-intrusion** range integrates with home automation to increase security: if an attempted theft is detected, the alarms are notified on touch screens and smartphones, so you always have everything under control and do the necessary actions to defend the home. Furthermore, there is the possibility of simulating the presence of people in the house, so as to dissuade the thieves when you go away. Even the new anti-intrusion **remote control** is innovative and enhanced by customizable smart features (up to 6), with the possibility - in the presence of a home automation supervisor in the system - to recall scenarios (which can also be configured using the daily time programmer).

NOTE: It requires an Internet connection. Controlling certain devices and features requires a compatible smart device. Controlling devices such as home appliances requires compatible smart plugs, devices and/or switches. Subscriptions may be required, and additional terms, conditions and/or charges may apply; they don't depend on AVE S.p.A. AVE S.p.A. declines any responsibility regarding the internet connection because service's supply isn't its competence. AVE S.p.A. disclaims any responsibility related to the incorrect use of the AVE Cloud and AVE Connect services. We recommend to contact a professional in order to achieve a perfectly done system's configuration.

Another great DOMINA Smart innovation is the **Video intercom** range which introduces external and internal units, able to dialogue with AVE home automation so as to expand the **communication** possibilities. For example: if you are away from home, the system can intervene to forward video intercom calls via app, allowing to answer to who rang the bell.

AVE revolutionizes the way of conceiving home with **DOMINA Smart, a hi-tech and IoT ready solution for the smart home**, a single integrated system for home automation, anti-intrusion and video intercom, always connected and ready to meet all needs.
