

AVE presents innovative solutions for hotel rooms' bedhead with customizable hi-tech design

AVE offers innovative concepts for bedhead: front plates in noble materials, available in various formats with adjustable design, that can be customized both aesthetically and technologically.

The AVE innovation for hospitality continues. The Italian Company launches on the market innovative **solutions for hotel rooms' bedhead**, ideal for customized, original and technological hotel installations. At the base of these concepts there are totally **configurable front plates** able to report - depending on the model - the hotel logo, the room number, and any other indication, so as to give a unique and inimitable aesthetic touch.

Depending on the chosen version, **customization can be done using laser technology or digital printing**. To meet all aesthetic and installation needs, there are available front plates in **various sizes** (from 2+2, 2+2+2 and 2+2+2+2 modules) and **dimensions** (with a height of 88 or 98mm). These plates are **adjustable** in horizontally or vertically, and **compatible with all AVE S44 solutions**, which includes 5 complete wiring accessories series, boxes, supports and valuable innovations, such as the revolutionary range of **touch controls** or the exclusive concepts with **toggle switches**. In this way it's possible to "create" a personalized bedhead system for every hotel reality.

To further validate this proposal there is a **wide range of front plates**, which boasts solutions in white **Corian®**, anthracite, natural and gold **aluminium**, and in **glass**, available both with clear finish (in absolute black, white and gold colours) and in frosted one (in water green and silver grey colours). For the plates with window **square and round frames** are available, which can be combined with both the finishing ring nuts and the optional milling for toggle switches. Instead, for those who wish to adopt touch switches in combination with glass plates, it's possible to personalize the surface of the plates by **laser engraving**, so as to make the (backlighted) control area immediately recognizable even in the dark.

Furthermore, these **innovative proposals** perfectly match the evolved **DOMINA Hotel system**, that contains all the AVE solutions and equipment dedicated to the hotel automation management, and to the advanced **DOMINA Smart** proprietary ecosystem. A hi-tech and classy touch for hospitality, that continuously evolves with AVE.
