# AVE building automation innovates hospitality: mini Touch Screens enter StraVagante Hostel's rooms

*AVE building automation supports a hospitality without barriers: the evolved mini Touch Screens make their appearance in StraVagante, the first social hostel in Verona.*

**AVE building automation innovates hospitality.** One example is the **StraVagante Hostel**, the first social hostel in Verona, whose management is also entrusted to disabled people. Recently inaugurated, the StraVagante Hostel has chosen to offer a **hospitality without barriers**. In order to facilitate the management of this structure, an advanced **building automation system** has been created, able of streamlining the daily reception operations and, at the same time, reserving an excellent service - also for disabled people.

So, inside the **StraVagante hostel**, the evolved **AVE mini Touch Screens TS01** make their appearance to manage the **building automation system of the room** through an extremely intuitive user interface with interactive menus and icons. These devices allow the control of various functions, such as lighting, temperature control or "Do Not Disturb", and the visualization of **local weather and tourist information**, as well as **hostel's information** and timetables. For maximum comfort, all these features are also controllable remotely allowing the guest to manage the room from his **smartphone**.

Also **rooms access management** is assisted by **AVE DOMINA Hotel system**. Each room of StraVagante Hostel is equipped with two different **card readers**. For room opening the guest must only insert his card in the **external reader**; leaving it inserted in the **internal reader**, however, the room's loads and services will be enabled. In this way, the hostel can benefit from a greater **energy saving** and an additional degree of **protection** when the room is unoccupied, preventing the occurrence of short-circuits when there aren't guests. The **MIFARE® technology** of AVE readers allow the generation of cards with a higher level of **security** and the integration of **innovative services** such as, for example, hairdryer's enabling.

A **top-level service** is paired with **beautiful design**. At StraVagante Hostel every room is accurate in the smallest details and also the **electrical system** is characterized by **original aesthetic choices**. The visible elements of the system are emphasized by the refined white tone of **AVE Domus 100 wiring accessories series** and the linearity of the **Young front plates**, which surround switches, thermostats and sockets giving the overall design a formal and aesthetic balance.

Thirteen rooms equipped with every comfort, a bar, a restaurant and a laundry service: this is the reality of the **StraVagante Hostel**, which has chosen AVE to offer an **innovative format of hospitality in Verona**, without barriers and extremely accessible, between design, **building automation** and smart solutions.
