

AVE'S CCTV BOARD ALLOWS SENDING IMAGES VIA MMS OR EMAIL: YOUR SAFETY ALWAYS ON YOUR HANDS

This new device is fully compatible with all models and brands of cameras and lets you stay in touch remotely with the intrusion detection system

Ave with its CCTV Board offers a versatile product that will appeal to anyone who wants to have a system with intrusion " video verification " or simply update the previous system. Even if it was not reported an alarm, through this accessory **you can get via email or MMS images of their cameras at all times**. Another key feature of this board is that is **fully compatible with all types of cameras to analog output** . This means that the new CCTV board is a device perfectly adaptable to every needs and at the same time can keep low the costs of installing.

The AFTVCC01 CCTV Board is capable of handling up to four analog cameras of any brand or model. This causes a considerable economic saving for users. If in fact they had already cameras they aren't required to replace them, while, in case should still buy them, they are totally free for purchase without being tied to use of special dedicated detectors.

The CCTV Board captures color images or black and white ones of any camera and send it to the last generation AF949PLUS and AF999PLUS central alarms. Once generated , the frames are easily transmitted as a picture message to the phone numbers entered in the phone book of the central and stored (up to a maximum of about 200). If there is an alarm are taken with an interval of two seconds apart some photos and immediately sent to one or more numbers (or directly to a preset email address). **In this way the user has the opportunity to check immediately for any false alarms, without having to go on the system to verify.**

With this accessory enabler users have full acces to the cameras. You can ask at any time via the telephone transmission of images to verify local situation. The operation is very simple: it's enough to send a text message that identifies the camera (for example: " CCTV 01 ") and the control panel transmits a snapshot of this camera. **The AFTVCC01 Board allows to maintain user's safety conveniently at hand.**

The installation of the "video-verification" Board" is easy and intuitive. All GPRS parameters required for configuration of the GSM / GPRS (AFGSM03) are loaded automatically, while the programming software of the control unit allows various options . You can see the field of view of each camera , download the images stored in memory or decide to delete all images on the board.

Ave has managed to provide an accessory easy to install and flexible in use . **The new CCTV board adapts to every needs, bringing security directly into the hands of the user.**
