

## **AVE home automation enters to IoT and Voice Assistants' world: the smart home of the future is reality now**

***AVE DOMINA plus home automation enters to Internet of Things expanding its wide range of features through a proprietary cloud with dedicated app and full compatibility with main Voice Assistants.***

How would you imagine the **smart home** of the future? **AVE**, Italian company leading the international scene of the high quality electric and electronic equipment manufacturers that is on the rise also in the home automation sector today, offered its personal answer implementing the innovative **AVE Cloud remote service** with dedicated app in its **DOMINA plus home automation** and - through **AVE Connect** - entering to the IoT world, including the ability to control the system with **voice commands** through the most widespread digital **Assistants**.

**The smart home of the future is reality.** Until today two philosophies coexisted: home automation and IoT devices. However, with **DOMINA plus** these two worlds come together exalting both their peculiarities through **AVE Cloud**, the **IoT ready home automation of AVE**: a system that is totally integrated with the house and always ready to meet the technological needs of its inhabitants.

Available for iOS and Android devices, the **AVE Cloud app** allows you to manage directly from your smartphones and tablets (or from a PC via an internet page) any automation and function integrated into the home automation system: lights, temperature, sound diffusion, motorized shutters, anti-intrusion, ventilation, irrigation, scenarios, loads control, just to name a few. **At any time and place you can stay in touch with your home** exactly as if you were in front of **DOMINA plus** Touch screen supervisors, with the ability to switch to a simplified icons' viewing or, rotating the smartphone horizontally, to virtually "navigate" among the rooms through practical graphical maps. **AVE Cloud** also offers an innovative feature that allows you to create scenarios using smartphone and customize them according to where you are (**geo-localized scenarios**). For example, when you go out, you can watch the gate that closes behind you. That's all you have to do. Your home will do everything by itself: lowering the rolling shutters and inserting the alarm.

**AVE Cloud is designed to share the advantages of home automation with the family.** It allows to connect to your home from multiple devices simultaneously, **without limits**. Even if you have more than one home automation, there are no problems: the app is structured to manage multiple systems, so as to better supervise even your second house. For **maximum protection**, **AVE Cloud** can be connected to the anti-intrusion system, water and gas detectors: if an alarm occurred, **push notifications** are sent directly to your smartphone to give you immediate feedback on what is happening.

Moreover, thanks to the **AVE Connect service**, **DOMINA plus integrates perfectly with the main Voice Assistants**, both through the respective **apps** and **smart speakers**. In this way, all the functions integrated by AVE home automation system - even the most advanced ones such as the Scenarios - can be easily recalled with a tap or though **voice commands** interrogating the Assistants. **AVE Connect** allows **DOMINA plus** to interact with the **IoT ecosystem** that can potentially be created inside a house. With **AVE Connect**, the home automation system will be controlled natively by the digital assistant, which will allow you to command other **IoT devices and other functions**, such as receiving weather and traffic information, or simply recalling a "routine", a planned sequence of actions to meet the primary

NOTE: It requires an Internet connection. Controlling certain devices and features requires a compatible smart device. Controlling devices such as home appliances requires compatible smart plugs, devices and/or switches. Subscriptions may be required, and additional terms, conditions and/or charges may apply; they don't depend on AVE S.p.A. AVE S.p.A. declines any responsibility regarding the internet connection because service's supply isn't its competence. AVE S.p.A. disclaims any responsibility related to the incorrect use of the AVE Cloud and AVE Connect services. We recommend to contact a professional in order to achieve a perfectly done system's configuration.

daily needs. AVE Connect is not only a service that integrates control through the voice, but also the **management and supervision of the entire smart home**. You can control a single light or those of the whole house. In the same way it's possible to interact with smart plugs, shutters and thermostats. All this through an innovative and continuously improving digital tool.

**With AVE, home automation becomes more technological and on a human scale.** With this assumption, DOMINA plus was launched a few years ago. Since then it has evolved over time, offering new functions up to allow complete management of the entire house. Today a further step towards the future is taken: thanks to AVE Cloud, you can control the home automation system exactly as if you were in front of touch screens supervisors. For those who want to centralize all their smart world, through AVE Connect, DOMINA plus easily connects to the Assistants of the most important manufacturers to manage the whole house (home automation and IoT devices) from a single app or through voice commands.

**The AVE home automation is IoT ready** in order to create unimaginable scenarios.
