

## **AVE home automation in a touch: hi-tech modernity for an elegant Italian villa**

***Combined with touch screen supervisors and touch controls, AVE home automation becomes hi-tech emblem of an elegant villa in the Chieti area.***

**Design and technology** are expertly combined to offer a new way of living. Thus the **AVE home automation** is part of this splendid Italian house in Cupello, in the province of Chieti. A modern **residential villa** with contemporary furnishings and **hi-tech heart**. Distinctive elements are the **elegant touch screen supervisors**, that are installed on the walls of living area and in the bedroom in order to allow the control the home in a comfortable and completely intuitive way.

Behind elegant **colour displays** there are in fact highly advanced control centers that are able to perform all the functions of evolved **DOMINA plus home automation system**. Through touch screens end users can handle the most basic functions such as lighting control (on / off), adjust the brightness through a dimmer, the multi-zone temperature or air conditioners management (through a special IR interface), up to more complex ones such as the supervision and control of intrusion detection systems, the opening and closing of the main electric drive systems (roller shutters or motorized curtains), monitor the consumption of electricity, water and gas (through a load control device) or activate preset scenarios in order to re-create the ideal ambience according to different situations.

In addition to supervision functions, thanks to an external temperature probe, the **Mini Touch Screen DOMINA plus 4,3"** can act as a **home automation programmable thermostat** allowing a complete management of the thermal zone where is placed. Through an appropriate configuration of Ethernet network, it's also possible to extend the operating range of this unit giving the ability to set daily thermal profiles, scenarios, timers and enabling the management of configurable commands that you can handle either **locally**, using your home PC, or **remotely** via mobile devices such as smartphones or tablets.

Perfectly coordinated with supervisors, **Young Touch front plates make touch technology a daily reality**. In addition to allowing the control of integrated automations, the front plates are transformed into **real integrated furniture**. Among the 15 available colour's variants, the property has chosen **Young Touch white plates with exclusive 3D effects**. Maintaining the same **ultra-thin design**, the plates thus assume greater visibility and bring in rooms a unique personalized touch. Young plates have been combined with **Domus 100 wiring accessories series**, where the white colour is enhanced in all its splendour.

It's enough a touch to understand that everything has changed. In this **elegant Italian villa**, **home automation** combined with **touch controls** and **exclusive AVE design** in order to leave an innovative imprint: **a new way of house's interpreting**.
