

AVE home automation: when technology meets design

An elegant AVE home automation reference proposes touch technology in an original mix of colours for a well-kept interior design project.

Combined with **touch screen** supervisors and **touch controls**, **AVE home automation** becomes the emblem of a new living interpretation: more attentive to the modern needs of the inhabitants, always connected to their habits. With these assumptions a very elegant home automation AVE reference rises in Lanciano, in the Italian district of Chieti. **A project where technology meets design to enhance the style of all its environment.**

In this house the property has chosen to combine the advanced **DOMINA plus system** with **touch technology**: in this way AVE home automation can give its best, returning a modern contact with the house and connected devices. The interactive core of this **home automation reference** is the elegant **Touch Screen** supervisor, from which end users can view all the information of system status and manage all its functions. Through intuitive **graphical maps**, that represent various rooms and icons of the integrated functions, they can manage lighting, rolling shutters, temperature, ventilation, technical alarms and anti-theft system.

Inside this **home automation** project there are also evolved functions, such as **energy saving, loads control and Scenarios**, a particular home automation functions that allows to activate multiple actions simultaneously. For example: through Scenario "Exit", end user can turn off all the lights, lower the shutters, disconnect unnecessary loads and activate the anti-intrusion system by a single command. Maximum comfort with minimum effort.

AVE home automation doesn't only mean technology, but also design with aesthetics for every environment. In this house the property has chosen to install innovative **Vera Touch** glass front plates. Thanks to the wide catalogue of finishes, it was therefore possible to differentiate each room with different colours: clear white, clear absolute black and clear Pompeian red. In this way, touch technology becomes a daily reality in an original mix of colours to satisfy the well-kept interior design project.

Perfectly coordinated with the Vera Touch controls, the **innovative AVE sliding plate increase safety** degree through a valuable aesthetic solution. Thanks to an AVE patented system, which allows plate "to slide" on the socket, it guarantees **greater protection** for the occupants, maintaining a perfect continuity with the home automation system.

Technology meets design in this elegant AVE home automation project to offer a modern contact with environments. A cutting-edge proposal that reinterprets living concept with **smart solutions**, designed to adapt to one's **lifestyle**.
