

**AVE PRESENTS THE NEW IP40 CONSUMER UNITS WITH BLIND COVER:
A NEW AESTHETIC SOLUTION TO MAKE PRECIOUS YOUR ELECTRICAL
INSTALLATION**

**The range, with Makio Hasuike Design, is enriched with new blind cover,
available for versions of 8,12 and 24 DIN rail modules.**

The IP40 Consumer Units, which are present in **many versions** and are endowed **with numerous technological details** that facilitate installation, comply with the main rules of product and electrical systems. **The range**, who has the **CE marking** and the **prestigious IMQ mark of quality**, is patented (patent n. 230 registered on 5 April 2012).

These awards are the result of the **unique features and the innovative technical solutions** which are applied to facilitate installation.

This new solution has a white blind cover, which goes with the aesthetics of AVE's 44 and 45 Systems series of wiring accessories. These blind versions preserve main technical characteristics that are present on the entire range:

- **an adjustable DIN bar for ensuring a perfect alignment on level** of the equipment and the cover. On versions of 24 and 36 DIN rail modules, the same bar is a single block (chassis) that is able to facilitate the wiring and installation operations.
- On its upper part **the cover has a series of holes** that allow an acoustic sound signals propagation.
- **The frame is separated from the DIN bar** and is installable when wiring and painting are finished.

The elegance of shapes, which are refied by the prestigious designer Makio Hasuike, the thickness of the front (only 10 mm) and the color matching **make these products suitable to dress any enviroment**. From classic to modern style, Ave's new proposal can be integrated perfectly into any furnishing context.

Spearhead solutions, that are **always made with the utmost quality, safety and regulations**, are designed not only to meet the evolving needs of different living styles, but also the needs related to the work of installers.
