

## **From Lake Garda a very elegant villa with AVE home automation: living becomes hi-tech through comfort, safety and design**

***AVE home automation takes part of the prestigious project signed by the Sangalli Architecture Studio: a 400 sqm villa that revolutionizes the concept of living in a technological key.***

Situated in Toscolano Maderno, on the Brescia side of Lake Garda, this **new elegant villa** sees **AVE home automation** as the protagonist of a different way of making architecture: up-to-date, minimalist and technological. Designed by Studio Sangalli, this project **revolutionizes the living concept** by proposing innovative solutions that celebrate the home as a temple of modern, open and rigorously **hi-tech** everyday life.

Located on the terracing that descend towards the Lake Garda, this building is spread over three levels for a total area of 400 square meters. The plan was designed to enhance the location of the villa - giving glimpses of enviable beauty on the lake landscape - and the most advanced technologies among which **AVE home automation proposal** becomes the symbol. The cardinal element is the elegant **15" touch screen display in clear black glass**, an innovative home automation supervisor integrated into the walls of the living area as a refined piece of furniture.

As the architect Gianfranco Sangalli explains: «**Home automation is definitely the new trend of living**, because it allows you to manage in a rational and waste-free way all the systems of a building. In this realization, the AVE DOMINA plus home automation system represents the achievement not only of the technological and functional objective that I had proposed, but also of the expectations of the client. In fact, **through the touch screen interface it is possible to manage every aspect of the home**: not only the anti-intrusion technologies and the air conditioning system - for better **comfort** and **optimization of consumption** - but also the control of artificial light, that can be made functional to the atmosphere that you want to assign to internal and external environments from time to time».

The end user can control the light and the automations connected also by the **touch commands of the Vera Touch series**. An original **mix of aesthetics and functionality**, exalted by architect Gianfranco Sangalli: «All the components of the entire system had to meet the criteria of linearity, functionality and elegance. Cognitive and constitutive elements of the Ave Touch series, distinguished by a **refined minimalism** and able to combine **elegance and technology**». «The choice of the clear absolute black glass front plates, the attractive blue leds that makes them recognizable even in the dark and the touch-sensitive commands with slight knurling - underlines the architect - are all peculiarities that make **Ave Touch system unique** in its genre, placing it in perfect analogy with the architectural connotation that the interior design wants to express».

The **AVE home automation** and the **Ave Touch** control solutions have therefore been chosen by the Sangalli Studio to highlight a new concept of architecture, careful to the modern living, always connected to the occupants' habits and the need of beauty necessary in a valuable project like this. **The elegant villa of Toscolano Maderno with AVE home automation** thus becomes the symbol of **a new way of conceiving the home**: a place where **comfort, safety** and **aesthetics** are enhanced through **AVE's technology** and **design**.
