

Ave presents its new universal multistandard socket: flexibility and design for the electrical system

**Fully compatible with most popular foreign electrical standards,
this socket allows you to charge your devices without adapters.**

MULTISTANDARD SOCKET (art. 441059TS): NO EU COUNTRIES

Those who have to travel abroad (business, work, pleasure,...) also have to take always with them an adapter to connect their electronic media devices to the electrical system. Boasting a long experience in this industry, Ave has been able to bring to market a truly innovative product that eliminates this problem with **a solution that combines technology with design.**

The multistandard socket is a product designed to simplify the life of people forced to move around the world for work, study or leisure reasons. This new device was specifically developed for **hotels, commercial buildings, public areas**; therefore, it's the ideal solution for places such as conference rooms, waiting rooms and offices, while it becomes strictly necessary in public places such as airports, railway stations, universities and schools that want to do cultural exchanges, as well as for all those hotels that want to reserve for their guests an ad adequate and optimal hospitality.

Ave has developed a socket able to receive plugs of the most common electrical standards: **UK standard plugs** of 5A and 13A, **Euro American standard plugs, Italian and Chinese standard plugs** of 10A. The multistandard socket 441059TS in 2 modules for Ave S44 is shuttered and characterized by those nominal data: 5/6/10/13A 250V - 15A 127V. Result of a long research, this device is designed also to facilitate installation: the screw terminals and the rear cable access make it much easier and reduce installation's times.

Ave's multistandard socket has a contemporary and refined design that fits any room recovering the same lines and white colour RAL9010 that distinguishes Domus Touch Wiring Accessories Series, modern appliances, televisions and multimedia devices. The new multistandard socket is a ductile device also from the aesthetic point of view, **it can be installed in any furnishing solution** and context giving rise to many possible solutions with the wide range of Ave's products.

Thanks to the adopted measures, **Ave has brought to the market an innovative device that stands out for its flexibility, technology and design.** A product that simplifies trips and allows to store power adapters and break down the limitations imposed by electrical standards.
