

Palazzo Morosini degli Spezieri: AVE in a new hospitality concept in Venice

Hospitality is renewed in Venice thanks to AVE solutions, that conquer the prestigious Palazzo Morosini degli Spezieri with innovative design and technologies.

Between past and present, antiquities and modernity. Result of an important renovation project, **Palazzo Morosini degli Spezieri** opens its doors to a **new hospitality concept in Venice**: a collection of 9 self-catering apartments with **AVE design and technologies**.

Situated in a beautiful historical frame - close to the **Rialto Bridge** but away from mass tourism - this prestigious **15th-century palace** has been transformed into an innovative hospitable place. Within its environments are included **AVE solutions dedicated to the hotels' world**. Thanks to two different types of **card readers** (external card reader and the internal one), **Palazzo Morosini degli Spezieri** reaches the highest standards of **comfort and safety**, without giving up to a refined aesthetic component, in line with the well-kept renovation project.

Perfectly coordinated with electrical system, **AVE card readers** allow to offer a **smart access system** to the apartments, to the common areas and to the relative functions. Boasting a simple and intuitive operation, the guest will only insert the card into the reader to open the door, while service status and "do not disturb" function (activated by a button inside the apartment) will be conveniently displayed on the external reader through the dedicated LED. The load activation and accommodations' services will be enabled only in the presence of an authorized card, so the structure can benefit from a **greater energy savings** and a further degree of **safety** preventing short circuits when the apartment is unoccupied.

In a prestigious palace like this, **exclusive finishes** couldn't miss. Upon a specific request of the client, AVE has made **stoneware front plates (Vera44) with an innovative design**. Framing the card readers and electrical wiring accessories (**Domus and Allumia series**), these plates ennoble technology embellishing it through refined and precious material effects.

Set in a privileged position - in front of the Grand Canal in the San Polo district, **Palazzo Morosini degli Spezieri** has become a well-known destination for housing in Venice. A technologically advanced and aesthetically cared place that inaugurates a **new hospitality concept. The hôtellerie is evolving with AVE.**
