

Sound diffusion: with AVE home automation and TUTONDO system music becomes smart

Thanks to the perfect integration between AVE and TUTONDO solutions, it's possible to create advanced sound systems with lots of control functions, design and technologies for every needs.

The music becomes smart with AVE and TUTONDO: from the collaboration between the two well-known Italian companies, it's born an **advanced sound diffusion system** that can be totally integrated with **AVE DOMINA^{plus} home automation**.

Through the interfacing between **TUTONDO Mondo T sound system** (MTA816 and MTAM816S) and **AVE DOMINA^{plus}**, it's possible to create an **innovative sound diffusion system**, which allows to manage up to **8 sound sources** (CD, TUNER, TAPE, MP3, etc.) and to spread musical signals with **Hi-Fi quality** in every area of your home or office.

The system is fully controllable by **DOMINA^{plus} touch screen** supervisors. Through a **user interface with icons**, you can choose your preferred audio source for each room, adjust the volume, tones, and switch ON/OFF the acoustic speakers of every zone. Thanks to **AVE home automation's flexibility**, it's possible to manage the soundtrack even within the **Scenarios function**, in order to mark the various moments of the day or to create the perfect atmosphere according to the different occasions.

The music intensity can also be controlled by **AVE volume controllers**. In this way it's possible to activate, deactivate and adjust the volume from each single listening point or centrally. You can also exclude a single loudspeaker or regulate the volume to 5 different intensity levels.

When it comes to **AVE home automation, safety and security always accompany the user**. If an **alarm event** occurs - or if the bell rings - the music volume is automatically reduced to warn the user; at the end of the signalling it resets immediately.

To complete the system, AVE offers **high performance flush mounting speakers** to create mono or stereo zones (protected against overload) and refined designs. Perfectly coordinated with all **AVE S44 wiring accessories series**, these devices can be connected directly to the **TUTONDO control units** and to their expansions; they can also be completed using **AVE finishing front plates** to offer an aesthetic continuity with the rest of the system.

AVE and TUTONDO make possible the realization of an **advanced sound diffusion system**, obtained by combining their productive excellences to achieve the best of **safety, design and comfort**.
