

## THE NEW TOUCH SCREEN DOMINA<sup>plus</sup> 4,3 " : HOME AUTOMATION FOR EVERYONE

### **Ave expands its supervisors range introducing a mini Touch Screen able to play the most advanced home automation functions**

Through the new Supervisor device Ave extends its home automation catalogue. This device integrates the most advanced features of DOMINA<sup>plus</sup> system in a little space. Result of an ongoing research, **the new Ave device aims to make affordable home automation for everyone.** Thanks to a highly competitive price, this Mini Touch Screen (code. TS01) is in fact designed to make available the best that residential home automation can offer through a solution that combines **design, technology and innovation.**

**Behind an elegant color LCD display there is in fact a highly advanced control center that is able to perform all the functions of evolved DOMINApplus home automation system.** Through a graphical interface with icons and an interactive menu you have the ability to control your home in a comfortable and completely intuitive way. Simply touching an icon you can handle the most basic functions such as lighting control (on / off), adjust the brightness through a dimmer, the multi-zone temperature or air conditioners management (through a special IR interface), up to more complex ones such as the supervision and control of intrusion detection systems, the opening and closing of the main electric drive systems (roller shutters or motorized curtains), monitor the consumption of electricity, water and gas (through a load control device) or activate preset scenarios in order to re-create the ideal ambience according to different situations.

In addition to supervision functions, **thanks to an integrated temperature probe, the Mini Touch Screen can act as an home automation programmable thermostat** allowing a complete management of the thermal zone where is placed. Through an appropriate configuration of Ethernet network, it's also possible to extend the operating range of this unit giving the ability to set daily thermal profiles, scenarios, timers and enabling the management of configurable commands **that you can handle either locally, using your home PC, or remotely via mobile devices such as smartphones or tablets.**

The enhancements don't stop here. The Touch Screen TS01 can boast of aesthetic and installation solutions that allow it to fit into any residential environment. To accommodate the different needs of users and installers, **the DOMINApplus Supervisor 4,3" can be oriented and work both horizontally or vertically.** So architects and installers are able to offer a solution that satisfy all types of customers. Thanks to its small size (with an encumbrance of only 11,6 cm long and 12,65 cm high) the Touch Screen 4,3" can be inserted and properly oriented in every room. The compatibility with 3+3 plates of Ave's Sistema 44 makes it suitable for integration into any furniture solution giving to user a large choice between glass plates (Vera), metal (Zama) or polymer (Personal) ones.

Adding to the previous recessed models with color display of 15", 12" and 5,7", **the DOMINApplus Mini Touch Screen is an innovative device that completes the wide range of Ave's proposals in the segment of home automation supervision.** Ave has managed to present a product that excels in flexibility, user experience and design.

**The TS01 is a real interactive control center** that allows to manage home automation system easily with a finger: **the best technology at the lowest price.**
