

## **AVE references: design and technology for every style and type of building**

**AVE innovations are displayed in fabulous villas, smart homes, hotels and commercial buildings.**

**AVE design and technology** are the protagonists of important achievements both in Italy and abroad. AVE products have been installed in homes, hotels, offices, companies, bringing its **Made in Italy quality and innovation** to over 100 countries around the world. In recent years, in particular, the growing interest in **home automation** has pushed the renowned Italian Company to bring flexible, reliable and expandable systems to the market, supported by revolutionary control and supervision concepts.

The **AVE DOMINA Smart IoT home automation system** defines new standards of comfort, security and control within innovative residential solutions. Among these, there is a recent project created in Concesio (BS), where the advanced AVE home automation system is enhanced by the top-of-the-range supervisor device with **15" Touch Screen display**, combined with the innovative **New Style 44 toggle switches**, declined in version with black glass front plates.

In the system built for a very elegant villa in San Pietro in Cariano, in Verona, AVE home automation also introduces the management of the motorized cover for the outdoor swimming pool and the control of the sound system present in the internal rooms, giving a concrete example of its **infinite possibilities of automation and integration**. Possibilities that are further expanded thanks to compatibility with the most popular **Voice Assistants** and through the innovative **AVE Cloud app**, which allows complete remote management of the system, exactly as if you were in front of a touch screen supervisor.

Cutting-edge technology must also be accessible, so AVE home automation adapts to any building offering maximum **cost scalability**. Whether it is a large villa or a medium or small apartment, the AVE smart proposal is ready to offer a **new quality of living**. Based on this concept, the Residenze dell'Olimpo in Milan has recently been built, where AVE home automation is the protagonist of a new way of conceiving the home, thanks to the various functions dedicated to **energy saving**, obtaining as a result, self-sufficient and 100% green houses.

Flexibility is a peculiarity of **AVE home automation technology** that allows it to be exploited even within **companies, offices, restaurants and commercial realities** and acting - in some cases - as a real aid for working activities. An example is the solution adopted by Tenuta Ballast in Gambellara (VI), renowned for Cortenera® wines. A sophisticated home automation system has been created inside this winery, highlighted by the elegance of 15" Touch Screen supervisors, that is here configured for managing various barrel adjustments and the ventilation system.

Another extension of AVE DOMINA Smart IoT system is the **home automation call system for nursing homes**, through which it's possible to manage and monitor calls from various areas or departments, as in the system built at the nursing home Sereni Orizzonti "Paolino Zucchini" of Passignano di Prato (UD).

Also **AVE technology for hotel management** has undergone a development widely appreciated. As evidence of this, some of the most luxurious and prestigious hotels have chosen to rely on the AVE system. An example above all is represented by the Torre Argentina Relais of Rome. A structure, which in the past had already chosen AVE hotel management system in the stand-alone version and which, in parallel with an expansion of the rooms

number, wanted to extend the range of manageable functions to offer maximum comfort to its guests. It therefore moved to On-Line mode in order to meet all the needs of the client, who can know the occupancy status of the rooms, supervise the general occupancy status of the structure locally and/or remotely and set up the comfort room temperature before the arrival of the guests now. All supported by the aluminium design of the **Vip System Touch card readers and Ave Touch switches**.

**AVE hotel management system** is efficient, optimized, reliable and expandable over time; it integrates perfectly with **home automation**, with **payment** and **air conditioning** systems so as to easily adapt to all needs, both in terms of costs and performance. A recent example of its potential is offered by the prestigious Aquatio Cave Luxury Hotel & SPA in Matera, where a highly advanced hotel management system has been created: with **computerized control** for the rooms' access and temperature, as well as for the entrances and lighting of the wellness area; in this way the staff can easily supervise the entire structure directly from the reception PC, raising the quality of the service.

For technology lovers, **new smart features** are also available that further support the **AVE** proposal for hotels and B&Bs through **room touch screens** and the possibility for guests to control the integrated automations via smartphone, as in the StraVagante Hostel in Verona.

Villas, apartments, offices, hotels: AVE offers an effective answer for all needs. Strong point of all AVE production and symbol of **high quality "Made in Italy"**, design represents the added value on which the Company has founded its success, that today is confirmed by highly prestigious creations where home automation and smart solutions represent the **new frontier of living** and designing buildings.
