

## Great success for AVE at Light + Building

***AVE solutions were widely appreciated during the famous international exhibition dedicated to lighting and construction sectors.***

Held from 2 to 6 October 2022 in Frankfurt, **Light + Building Autumn Edition positively welcomed the AVE solutions.**

In particular, the vast public of Light + Building were able to admire the **home automation** product news, both for **AVEbus** proprietary system proposals and KNX standard ones. Among the new products that expand and complete the **KNX range** - in addition to the flush-mounted devices (as switches and Room Controller) - there were new **DIN rail devices** designed to manage various functions, such as light actuators (including the DALI system), roller shutter actuators and multifunction actuators for valves and fan coils (for 2 or 4-pipe systems).

Exhibition visitors were also able to appreciate the new **IoT wiring accessories series** and the new ranges dedicated to **2-wire and IP video intercom systems** which, in addition to their technological value, stood out for their elegant and avant-garde aesthetics. Conceived to emphasize electrical systems with made in Italy design, the **innovative AVE switches** (traditional, touch and toggle) also attracted attention, earning very positive reviews from professionals.

Therefore, **Light + Building Autumn Edition 2022** was another great success for AVE and the innovation that for years has seen it as a protagonist on the international stage with quality solutions, developed to adapt to the different standards and needs of a constantly evolving sector.
