

AVE Home Automation 7" and 10" Touch Screens: the smart evolution of the species

***Two stylish high-tech jewels for the management of smart home functions:
home automation, anti-intrusion and video intercom systems.***

The **AVE range for home automation supervision** adds the **7"** (code TS-SMART7xx) and **10"** (code TS-SMART10xx) **Touch Screens**: these devices boast an **innovative design**, with bi-material aluminium and glass frame, and stand out on technological level.

In fact, the new **AVE Touch Screens** have been designed to control every function integrated in the smart home, offering the possibility:

- to manage the **AVE DOMINA PRO** home automation system (through Web Server's page);
- to manage the **AVE DOMINA Smart** system;
- to manage directly the **AVE DOMINA Anti-intrusion** AF927PLUS and AF927PLUSTC central units;
- to view the calls that come from the outdoor stations of the **V44 SMART video intercom system**;
- to view the IP cameras installed on the system;
- to view weather forecasts (in collaboration with "Il Meteo");
- to communicate via KNX protocol.

In addition to the wide range of features, these **Smart Touch Screens** always guarantee perfect performance and a clear and intuitive user interface, which allows you to launch **home automation scenarios** directly from the home page.

Compared to the smaller model, the 10" Touch Screen has an **integrated LED bar** for soft ambient lighting (with selectable colour) and has the ability to communicate also via the KNX protocol. The flush-mounted installation in the horizontal 3-modules box guarantees an **ultra-thin design** with only 9 mm protrusion from the wall, while the 7" device can be installed on the wall (on a horizontal 3-modules box).

Both models are available in **two colours**, natural or anthracite brushed aluminium, thus offering perfect **aesthetic coordination** with the aluminium front plates of the System 44 and with the new range of Smart 44 front plates.

The **7" and 10" Touch Screens** mark an important evolution in the field of smart home and home automation supervision, allowing the monitoring and control of all home automation, anti-intrusion and video intercom systems, always with AVE reliability. Two high-tech jewels configured to satisfy any need for comfort, security and communication required by a modern home today.

The future is getting smarter with AVE.
