

AVE 2-wire video intercom wall-mounted outdoor units

Now the AVE V44 EASY video intercom range also includes one and two-call wall-mounted outdoor units.

AVE presents two important new products that enrich and complete the offer related to its **2-wire video intercom system**: the one-call (code VI2F-PE1AP) and two-call (code VI2F-PE2AP) **wall-mounted outdoor units**.

Designed and manufactured for installation in **single and two-family homes** or in **tertiary** sector environments, on an aesthetic level they stand out by exhibiting a die-cast aluminium front panel in a natural grey colour, in line with the other units in the AVE video intercom range. Thanks to their **compact design** with particularly small dimensions (WxHxD: 86x168x25 mm), they can be mounted on columns or in confined spaces.

To meet all installation requirements, a **rain cover** (code VI-RPPEXAP) is available, an accessory designed to protect outdoor units in situations where they are particularly exposed to the elements.

Both wall-mounted units are equipped with a built-in **MIFARE contactless reader**, which allows the gate to be opened quickly and easily using a card (code 44339CHU-MB) or TAG key fob (code 44339CHU-MT). In addition, they have the following features:

- **color camera** with white LEDs for night lighting;
- **No. 2 relays** (power and dry contact) for managing the pedestrian gate and driveway gate;
- **trimmer** for adjusting the speaker volume and the closing time of the n.o. contact;
- white illuminated **name tags**.

Integration with the 7" Wi-Fi indoor monitor allows video intercom calls to be forwarded directly to smartphones via the **Video V44 app**, available for iOS and Android devices.

The new **wall-mounted outdoor units** can coexist with other devices in the AVE 2-wire system. Simple to install, they are offered both as a single product and in **practical kits** designed to meet users' needs. An added value to experience the advantages of the **AVE V44 EASY video intercom range**.
