

Great success for AVE at Light + Building 2026

At the Frankfurt trade fair, AVE confirms its role as a protagonist with cutting-edge solutions for the smart home and advanced building.

The experience of **AVE at Light + Building 2026** concluded with an extremely positive balance. The Italian company held a prominent position at the Frankfurt am Main trade fair, which hosted the internationally leading exhibition for the world of building technology from March 8 to 13.

The event provided an opportunity to present the best of AVE's proposals to an audience attentive to quality and technological avant-garde. The company's technicians assisted visitors, offering specialized consultations on AVE innovations that are redefining the concept of **smart home and advanced building**.

Home automation solutions garnered considerable interest, confirming the effectiveness of proposals based on **KNX standard** and the **proprietary AVEbus system**. Particular attention was paid to the IoT connected wiring accessories series with Wi-Fi Mesh technology, which demonstrated AVE's ability to enhance smart functionalities in a versatile and high-performance manner. Excellent feedback was also obtained for the **new generation of monitors for the smart home**, devices capable of managing video intercom, anti-intrusion, and home automation systems in an integrated way, whether wired or connected.

On the **design front**, a cornerstone of all AVE production, the latest innovations presented by the company were positively received. Among these, the **Whitek 44 wiring accessories series** – internationally award-winning – confirmed its appeal thanks to its ability to meet the demands of a market increasingly attentive to the aesthetics of the electrical system. Great interest was also generated by the new generation **axial controls** which, in addition to guaranteeing perfect alignment with the front plate, stand out for their high reliability, tested for over 100,000 maneuvers. Finally, the new **cylindrical metal toggle switches**, paired with the collections of ultra-thin front plates: a true "contemporary must-have" for interior design.

Participation in **Light + Building 2026** reaffirms AVE's constant commitment to promptly respond to the challenges of a global market in continuous evolution, maintaining an indissoluble combination of technological cutting-edge and design excellence.
