

Allumia 44 Wiring Accessories: Tech Grey becomes eternal

The distinctive colour that characterizes the series, enhanced by the special anti-scratch paint, finds its perfect complement in the new ultra-thin front plates, transforming the light point into a piece of furniture.

With Allumia 44, AVE explores a design dimension where technological inspiration merges with the most sought-after interior design trends. A complete and versatile proposal, capable of coherently adapting to every type of system. Through its iconic **Tech Grey shade**, this series represents a high-profile technical solution for traditional, IoT, or home automation installations, suitable for any type of residential, commercial, and hotel context.

The main strength of the Allumia 44 wiring accessories is the special **anti-scratch paint with anti-flaking protection**. This treatment is designed to make Tech Grey extremely resistant: the components do not lose their paint and are not afraid of wear, maintaining their original appearance even after years of use.

Today, the series is further **enhanced through combination with the new reduced-thickness AVE front plates**. Among these, the innovative ultra-thin collections **Smart** in metal and the **Easy Smart** and **Young** lines in technopolymer stand out; all display the Tech Grey colour to ensure perfect aesthetic coordination with the Allumia 44 wiring accessories.

The **new generation axial controls** intervene to elevate the aesthetics of the light point, which, in addition to standing out for extraordinary constructive quality that guarantees a duration superior to industry standards, ensure a consistently perfect alignment with the cover plate. On the functionality front, the range introduces the **Multisocket**: an AVE-patented monoblock capable of integrating up to 4 combinations of powered sockets with single wiring (one bipasso, one schuko, and two USB, type A and C) into a traditional 3-module flush-mounting box.

Finally, Allumia 44 integrates with all the latest evolutions of AVE systems for residential and professional environments: from thermostats, to touch screens for the supervision of AVE technological systems (home automation, video intercom, and anti-intrusion), up to card readers for hotel management.

With Allumia 44, AVE defines a perfect combination of **cutting-edge technology and aesthetics**, providing professionals with a wiring accessories series capable of transforming innovation into concrete design value.
