

New AVE home automation rockers: the evolution of control for AVEbus and KNX Systems

Thanks to their functional design and full compatibility with control devices based on AVE's proprietary protocol and the KNX international standard, they make interaction with intelligent buildings even more immediate.

AVE presents the new generation of home automation rockers—a solution that blends technological innovation and aesthetics to optimize the user experience in smart buildings. Designed to support professionals, the new range stands out for its **elegant and functional design**, engineered to ensure end user can easily and immediately recognize control points.

Technological continuity and intuitive interaction

One of the main advantages of the new home automation rockers is their **full compatibility with control devices on AVEbus and KNX protocols**. This feature ensures a smooth, compromise-free implementation for installers and system integrators in both existing installations and new build projects.

Interaction with the end user has been refined through a functional and discreet backlighting system designed to maximize daily convenience:

- **two backlightable, clearly identifiable symbols** mark the two actuation points to guarantee precise control at all times;
- **a central backlightable symbol** is dedicated to the immediate location of the control point, even in total darkness.

Aesthetic versatility and maximum design flexibility

To precisely meet installation and interior design requirements, the range is available in **four standard versions**: neutral (code 44xELAN2), dimmer button (code 44xELAD2), arrow button (code 44xELAC2), and ON/OFF button (code 44xELAF2).

To ensure aesthetic coordination with the AVE S44 wiring series and expand integration options across various living spaces, five color variants are available:

- **Whitek 44 white** with MATT finish (RAL 9010)
- **Tekla 44 grey** with MATT finish (RAL 7016)
- **Domus 100 white** with GLOSS finish (RAL 9010)
- **Allumia 44 tech grey** with GLOSS finish (RAL 9007)
- **Class 44 ivory** with GLOSS finish (RAL 1013)

The new **AVE home automation rockers** represent the ideal solution for enhancing smart buildings driven by AVEbus and KNX protocols—an evolution that offers installers and designers the **perfect combination of style and practicality** to elevate their technological choices.
